

Hello dear official,

Please contact us for our applied systems in order to reach the energy, which is the greatest need of our age, in our daily life, workplace and works by equipping our daily use items with solar energy systems.  
our related youtube videos and our website; You can watch it on our page by clicking on the picture; (no viruses, spam)

**-Should I buy solar panels now or wait?**

<https://www.youtube.com/watch?v=HMAJfiuTQw4>

Considering that the prices in 2000-year decreased from 12 dollars for one watt to 3.82 dollars with a medium account in 2019-year, are solar panels cheap, this is a fair question. If we look at the decrease in prices in the last years, it is possible to observe that solar photovoltaic (PV) modules will become cheaper in a few cities. However, by

looking at the preferred sun tools, 2018 price recipes as well as some other meanings, the price period is decreasing in the last two decimals.

For example, if you look at three years to buy a PV system, and solar energy prices are indexed and quoted in ABŞ dollars; That is to say, this decreases by 2% in the province and reduces the value of the standard 15 000 dollar system in the third province to 14 100 dollars. For each province you observe, you can spend 300 dollars for solar energy projects.

However, starting from the first city, have you thought about the variant of solar energy for you, as long as you take advantage of the research?

**\* Our projects and designs can be customized to person, location, item, integrated into the existing and pre-order method is prepared**

**\* Our systems are guaranteed for 2 years of use in addition to product warranties. Have energy anytime, anywhere!**

**You can get support from us from A to Z for your solar energy systems.**
